Total Imports by Countries	8

EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity. These types of imports are reported by the importing firms directly to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at DBS during the calendar period, and on electricity reports received within the following calendar month. There is a lapse of up to a week between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the period in which these imports actually occurred.
3. **Coverage:** Import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses. There may, however, be an important difference in the time at which warehoused goods are recorded as imports: some shipments which enter customs warehouses remain there for several months before clearance.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 882-99) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada, bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad, generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 2 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. 1 (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Number refer to complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but importers often report c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. 1. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.
9. **Country Classification:** Statistics are compiled and presented on a geographical basis and the use of state or territorial titles carries no political, territorial or constitutional implications.

UNITS OF QUANTITY

BBL	Volume in barrels.
CARAT	Weight in carats.
CORD	Volume in cords.
CWT	Weight in units of 100 lb.
CWT N	Weight of contents in units of 100 lb. (containers excluded).
DOZ	Number of dozens.

Annual Classification Changes and Year to Year Statistical Comparability

The purpose of these notes is to describe the measures taken to provide for year to year comparability between classes and to outline the reasons for commodity classification changes. In January each year the Import Commodity Classification (M.C.C.) is revised and a number of changes are introduced. These changes take several forms:

1. Certain classes are re-numbered, largely to bring the MCC in line with the Standard Commodity Classification (SCC) or to provide for future expansion of the classification, e.g. 1972 class 155-72 became class 151-90 in January 1973.
2. A number of new classes are introduced to permit more precise definition of major commodities moving in trade. This is done by splitting existing classes into one or more new classes, e.g. class 053-19 was split into classes 053-09 and 053-19 in January 1973.
3. Occasionally, where the volume of trade does not warrant separate classification, classes are combined with other classes or become part of a group residual (n.e.s.) class.

The commodity classification therefore evolves to reflect the changing composition of Canada's international trade and to better meet the requirements of users. An unavoidable by-product of this process is that when the content or numerical designation of commodity classes change it is not always possible to provide, in the framework of a report, comparable data for the previous year's trade.

In order to eliminate this problem the following measures were adopted:

1. A class for which the code changed in 1973 is shown with its current code whether
 - a) it retained the same content or
 - b) changed in content.
2. Where a previously existing class was split into several, in 1973, the newly created classes were
 - a) recombined and shown under the code of the previous class, or under the most appropriate current code;
 - b) shown under the current codes where it was possible to make the split retroactive;
 - c) left unchanged when a retroactive split was not feasible and where the new codes were in existence for the two latest years.

3. Where previously existing classes were combined into one, in 1973, the data are shown under the current code.
4. Where changes in class definition and content made it impossible to achieve comparability over time for any of the specific classes involved the commodities concerned were:
 - a) aggregated for each of the 2 years, combined with the appropriate residual class and shown under its code;
 - b) aggregated for each of the 2 years and shown under a "dummy" class code;
 - c) left unchanged where none of the above alternatives was feasible.
5. Where only class content changed, the original class code was retained.

In some instances units of quantity are changed as part of a continuing program to standardize the unit in the various economic statistics published by Statistics Canada. Where such changes took place, quantities were converted to a unit common to all the periods covered by this report.

Users should note that the equivalence table shown below is presented in the sequence of the publication code adopted for this report. To that extent the sequence of any of the classifications used in the period 1972 - 73 is not respected. Besides, any class in existence during that period may be shown in several places in the equivalence table.

In the table following, the number appearing in the NOTE column refers to the type of measure adopted to ensure comparability.

EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity. These types of imports are reported by the importing firms directly to Statistics Canada.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at SC during the calendar period, and on electricity reports received within the following calendar month. There is a lapse of up to a week between the actual customs clearance of imports and receipt of the relevant documents in SC. Electricity imports are usually included in statistics for the period in which these imports actually occurred.
3. **Coverage:** Import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses. There may, however, be an important difference in the time at which warehoused goods are recorded as imports: some shipments which enter customs warehouses remain there for several months before clearance.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 882-99) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad, generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 3 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. 1 (SC Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Number refer to complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but importers often report c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. 1. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.
9. **Country Classification:** Statistics are compiled and presented on a geographical basis and the use of state or territorial titles carries no political, territorial or constitutional implications.

UNITS OF QUANTITY

BBL	Volume in barrels.
CARAT	Weight in carats.
CORD	Volume in cords.
CWT	Weight in units of 100 lb.
CWT N	Weight of contents in units of 100 lb. (containers excluded).
DOZ	Number of dozens.
DZ PR	Number of pairs in dozens.
FT	Length in linear feet.
GAL	Volume in Canadian gallons.
GROSS	Number of gross.
KG	Weight in kilograms.
LB	Weight in pounds.
LB N	Weight of contents in pounds (containers excluded).
M	Number in thousands.
M B F	Volume in thousand board feet.
M C F	Volume in thousand cubic feet.
M KWH	Thousand kilowatt hours.
NO	Number.
OZ	Weight in ounces.
PACK	Number of packs.
PAIR	Number of pairs.
P GAL	Volume of alcoholic content in Canadian gallons of the strength of proof.
PKG	Number of packages.
SF 3/8	Volume in square feet of 3/8 inch in thickness.
SQ FT	Area of square feet.
SQ YD	Area in square yards.
TON	Weight in short tons of 2,000 lb.
TR OZ	Weight in troy ounces.
